

## Summer 2024 Internships at Texas Biomed/SNPRC

The summer internships at Texas Biomedical Research Institute (Texas Biomed) and the Southwest National Primate Research Center (SNPRC) are established to offer paid, hands-on, real-world experience with cutting-edge research, primate care, and administrative research support. It is our goal to provide all interns with a rich learning culture that encourages ongoing development of skills and knowledge. Texas Biomed and the SNPRC offer three(3) summer internship tracks to undergraduate and graduate students.

Texas Biomed Summer Scholars Program (infectious disease research)

SNPRC Summer Internship Program (veterinary research and primate care)

Texas Biomed Summer Administration Internship (administrative support of research)

Successful applicants for these paid internships will begin their experience at Texas Biomed/SNPRC starting on **June 3 and ending on July 26, 2024**.

Internships are available on both a part- and full-time basis when appropriate. Remote or hybrid work is available when appropriate. Extending internships beyond the formal 8-weeks of these intern programs to meet class requirements is at the discretion of the department or laboratory where the intern is placed.

All applicants must be eligible to work in the United States. Texas Biomedical Research Institute is not able to sponsor work visas for our summer internship programs. If selected for a summer internship, applicants must be able to show proof of U.S citizenship or proof of eligibility to work in the United States.
